Crimson Trace New Laserguard® for Springfield Armory® Hellcat®

January 12, 2022

Crimson Trace® is proud to announce the release of one of the most coveted Laserguards in our more than two decades of history. This Laserguard® is finally here to boost the full potential of the Springfield Armory® Hellcat® and elevate confidence in the moments that matter.

Built with the Instinctive Activation™ technology that put Crimson Trace® on the map, the Laserguard® fit for the Hellcat® is activated with a button that sits underneath the triggerguard where the middle finger naturally sits. Not only is the laser sight's operation and durability superior, special care was taken to match the texturing to the Springfield Armory® Hellcat®.

It's powered by a bottom-accessible 1/3N battery and boasts two hours of continuous run time, and it also has a master override switch to prevent activation when necessary. With the included hardware, the laser sight is user-adjustable for windage and elevation.

The Laserguard® for the Springfield Armory® Hellcat® is available with a green or red laser sight. It is water-resistant, built with a durable polymer, and carries the Crimson Trace® Crimson Protect Lifetime Warranty. The Laserguard® family is proven to hold up when it matters most, and Crimson Trace® is proud that quality now extends to the Springfield Armory® Hellcat®. At Crimson Trace®, **Failure is Not an Option**.

About Crimson Trace
