

### Crimson Trace New Rapid Illumination Grip (RIG™)

January 27, 2022

#### RIG™: Rapid Illumination Grip

Crimson Trace is excited to announce the next step in foregrip technology in the new Rapid Illumination Grip (RIG™). By combining a 500-peak-lumen weapon light with an angled foregrip, Crimson Trace has efficiently streamlined the highest-demand accessories for rifles, carbines, and pistols into one multi-purpose device.

Completely ambidextrous, the RIG™ is compatible with M-LOK or Picatinny rails and includes an optional, ambidextrous remote switch. The primary switch naturally sits at the resting point of end-user's index finger for seamless and effortless activation. Constructed from a mixture of polymer and aircraft grade aluminum, the RIG™ undergoes rigorous simulated and live-fire testing to withstand the most extreme conditions.

Two included quick-detach, rechargeable batteries can be exchanged without removing the unit from the firearm. At 1-hour peak-lumen runtime per battery, the RIG™ stays in the fight in the moments that matter most. The lumen output can be manually adjusted with left- and right-side variable brightness buttons.

The angled foregrip of the RIG™ can greatly enhance the maneuverability of rail-equipped firearms, especially the incredibly popular AR pistol platform, but it is equally effective on full-size rifles, carbines, and even AK-style firearms.

Backed with the Crimson Trace Crimson Protect Lifetime Warranty, the RIG™ provides a tactical advantage for all endusers in any situation, because at Crimson Trace **Failure is Not an Option.**

#### About Crimson Trace

As an industry leader in laser sighting systems, optics, and tactical lights, Crimson Trace® is dedicated to providing premium products for shooting enthusiasts from hunters to competition shooters and self-defense gun owners.
